## Background

In Shenzhen, China, Lars Solari was a legend in the underground tech scene.

The son of a waste reclamation tech and a black-market parts dealer, Lars learned to weld before he could read. By 14, he'd rebuilt a decommissioned drone from junk parts and hacked it to fetch contraband for smugglers. His talent was undeniable, but his ethics were...flexible.

He got caught. Five times. Now serving a stacked sentence in a state-run prison, Lars spends his days patching failing systems for the same city that locked him up. But he's still scheming: quietly trading favors, and building something in the background. Something that might just flip the system on its head.
