Special Abilities
<p>Languages Known</p> <p>Native (native, d8)</p>
Description
<p>Mastermind scientist, doctor, hacker, and billionaire. Like a cross between Hannibal Lecter and Lex Luthor if they were both True Neutral instead of Lawful Evil.</p>
Background
<p>Stone is very logical. Too logical some say. He is interested in humanity as a concept but not very interested in people as individuals. He treats them as living computers whose software and hardware could be hacked and optimized if only they cared enough.</p> <p>He discovered an algorithm which created a major advancement in computer modeling, leading to much better superconducting materials and cancer cures.</p> <p>It also led to the rapid decoding of all public key cryptography, letting the public read decades worth of messages sent by the major military powers and banks and costing many of the world's richest nations and people a lot of trouble and money.</p> <p>Stone predicted all these things would happen and preceded anyway out of curiosity and as revenge against the people who tried to prevent him from advancing science and medicine. For this he gained a multi-billion dollar fortune, a Nobel prize, and a lifetime prison sentence.</p> <p>However he has been hard to contain, having already escaped prison three times through a combination of bribes, pre-planned schemes, and cunning.</p> <p>Many of the world's most powerful people think he is too useful to kill outright and executing billionaires is a very bad precedent, but he is also too dangerous to leave on Earth- so the Redemption mission would be the best place for him.</p>
